

PLAZA 1900

Tysons Corner, Virginia

Client: Centennial Development Corporation

As part of the project team, BC helped to bring this project from rezoning through construction. The highly visible 190,000 square foot project was one of the largest lease transactions in Northern Virginia during 1989. BC engineered solutions to off-site water supply and storm drain problems that kept the project on schedule. The site also features an innovative stormwater management design.
